

100 BEST KNOWN SQUARE PACKINGS

The Squares Project · github.com/jlevy/squares

The square packing problem asks for the side $s(n)$ of the smallest square that can hold n unit squares, where the squares are free to rotate but cannot overlap

proved optimal (45 of 100) recent result, since August, 2026 (81 of 100)
 exact value known (97 of 100) colors indicate distinct tilt angles
 shade indicates number of full-side contacts
 rigid (14 of 100) deg is the algebraic degree of that side length
